As an increasing number of donors are requiring IATI publishing with the aim to improve coordination and effectiveness of aid, many more development actors across the globe are looking for streamlined and efficient ways to deliver IATI reporting. This is exactly why TolaData has partnered with Data4Development to offer comprehensive IATI reporting services - helping you extract your results data from TolaData and then using D4D's IATI tools and training support to combine it with all other necessary data to produce one fully compliant and high-quality IATI dataset, validated and published on the IATI Registry.

The International Aid Transparency Initiative (IATI) is a global initiative that makes information about aid and project activities accessible to all via its open data standard. With IATI, professionals working in the development and humanitarian sector can easily track how much aid goes where for what purpose and what impact these development operations are making. Through creating this transparency, the IATI Standard helps ensure that resources go to the people, places, and projects that need them most.

For anyone and everyone engaged in international development who is willing to make their aid, activities, and results information transparent in order to maximize the effectiveness of aid. This can include governments, donors, multilateral institutions, private sector companies, civil society organisations, foundations, NGOs, and others.

Easy publishing and reporting of IATI data with TolaData and Data4Development (D4D)

No matter where your organisation is in your IATI journey, with TolaData and D4D, you can start publishing and reporting according to the IATI Standard right away.

What is IATI?

The International Aid Transparency Initiative (IATI) is a global initiative that makes information about aid and project activities accessible to all via its open data standard. With IATI, professionals working in the development and humanitarian sector can easily track how much aid goes where for what purpose and what impact these development operations are making. Through creating this transparency, the IATI Standard helps ensure that resources go to the people, places, and projects that need them most.

Who is IATI for?

For anyone and everyone engaged in international development who is willing to make their aid, activities, and results information transparent in order to maximize the effectiveness of aid. This can include governments, donors, multilateral institutions, private sector companies, civil society organisations, foundations, NGOs, and others.

How can TolaData and D4D help?

As an increasing number of donors are requiring IATI publishing with the aim to improve coordination and effectiveness of aid, many more development actors across the globe are looking for streamlined and efficient ways to deliver IATI reporting. This is exactly why TolaData has partnered with Data4Development to offer comprehensive IATI reporting services - helping you extract your results data from TolaData and then using D4D's IATI tools and training support to combine it with all other necessary data to produce one fully compliant and high-quality IATI dataset, validated and published on the IATI Registry.

Demonstrate your transparency and accountability

We help you publish information about your organisation's activities and results using the IATI Standard so that you can be transparent on how your donor funding flows into your projects from the initial commitment to final delivery.

Streamline your compliance with donor requirements

Enjoy full compliance with IATI reporting, delivered directly from TolaData together with D4D's expertise on IATI. We provide validated reports for your organisation and we even publish them each quarter to the IATI Registry for you, without the need for manual number crunching and data consolidation on your end.

Save time, money and prevent errors with Integrated IATI publishing

With the IATI specific features built into TolaData, together with the IATI training support and reporting tools provided by D4D, you can easily combine your results and financial data and convert it into a fully compliant IATI (XML) dataset, validated and published on the IATI Registry - saving you time, money and helping you prevent errors.

Continuously use and improve your data

By publishing your data to IATI, information about your activities, finances, results, locations, documents, and other project-related details are made available in one common format, under one roof, ready to be accessed, utilized, and improved at all times. Plus, by doing so, you help meet the demands of a wide range of stakeholders in international development for good quality and useful data.
